

Website Audit Report - Simple Business Explanation

1. Missing Canonical Tags

Issue: Canonical tags are missing across the website.

For Example:

Imagine ALCAS publishes the same service information through multiple URLs.

Google sees:

- Service Page A
- Service Page A from Facebook
- Service Page A from WhatsApp

Even though all three pages contain the same information, Google may treat them as different pages.

As a result, the SEO value gets divided instead of being combined into one strong page.

Business Impact:

- Reduced SEO efficiency
- Lower ranking potential
- Search engines may struggle to identify the preferred page

Recommendation:

Implement self-referencing canonical tags on all important pages.

Priority: Medium

2. Broken Links (404 Errors)

Issue: Users are redirected to pages that do not exist.

For Example:

Imagine a customer clicks "Contact Us" expecting to reach the enquiry page.

Instead, they arrive at a page saying:

"Page Not Found."

Most visitors will leave immediately rather than searching for another way to contact the company.

Business Impact:

- Poor user experience
- Loss of trust
- Potential lead loss

Recommendation:

Identify and fix all broken links.

Priority: High

3. Missing Meta Descriptions

Issue: Pages are missing meta descriptions.

For Example:

Imagine two shops in a shopping mall.

One shop has a clear signboard explaining what it offers.

The other shop has no signboard at all.

Most people will enter the shop that clearly explains its services.

Meta descriptions work similarly in Google search results.

Business Impact:

- Lower click-through rates
- Reduced organic traffic
- Missed lead opportunities

Recommendation:

Create unique meta descriptions for all important pages.

Priority: Medium

4. Slow Website Performance

Issue: Pages take longer than expected to load.

For Example:

Imagine a potential customer calls your office.

The phone keeps ringing for a long time before someone answers.

Many people will simply hang up and contact another company.

A slow website creates the same experience online.

Business Impact:

- Higher bounce rate
- Reduced engagement
- Lost enquiries and conversions

Recommendation:

Optimize images, scripts and page performance.

Priority: High

5. Missing Alt Text

Issue: Images do not contain descriptive alternative text.

For Example:

Imagine presenting a portfolio to a client and showing images without explaining what they represent.

The client can see the image but may not fully understand its purpose.

Search engines face a similar challenge when alt text is missing.

Business Impact:

- Reduced image SEO opportunities
- Accessibility limitations
- Lower search visibility

Recommendation:

Add descriptive alt text to all important images.

Priority: Medium

6. Missing H1 Tags

Issue: Pages do not have a clear primary heading.

For Example:

Imagine opening a book that has no title on the cover.

You would struggle to understand the topic immediately.

H1 tags help both visitors and search engines understand the purpose of a page.

Business Impact:

- Weaker SEO signals
- Reduced content clarity
- Lower ranking potential

Recommendation:

Implement one clear H1 tag per page.

Priority: Medium

7. Redirect Chains

Issue: Users are redirected through multiple URLs before reaching the final destination.

For Example:

Imagine someone asks for directions to your office.

Instead of receiving a direct route, they are sent through three different locations before reaching the destination.

The visitor eventually arrives, but the experience is slower and less efficient.

Business Impact:

- Slower page loading
- Reduced crawl efficiency
- Poor user experience

Recommendation:

Replace redirect chains with direct destination URLs.

Priority: Medium

8. Broken Contact Forms or CTA Buttons

Issue: Contact forms or call-to-action buttons do not function correctly.

For Example:

Imagine a customer walks into your office ready to discuss a project.

However, there is nobody available at reception to assist them.

The customer may simply leave.

A broken contact form creates the same situation online.

Business Impact:

- Direct lead loss
- Missed sales opportunities
- Reduced conversion rates

Recommendation:

Test all forms and CTA buttons regularly.

Priority: Critical
